

THOMPSON ESTATE

ENVIRONMENTAL POLICY

The Thompson Estate winery and vineyard produces premium wine with domestic and export markets. It is situated approximately 20 km north of Margaret River in the Wilyabrup sub region of the Margaret River Wine Region.

The property on which is home to our winery and vineyard is blessed by many native flora and fauna species and the gentle flow of the Wilyabrup brook runs through the property gives a true sense of tranquillity.

With this land comes great responsibility to preserve, maintain, and where possible improve the biodiversity and environmental integrity of the site. We here at Thompson Estate believe it is our duty to and desire to minimise the impact that our winery and vineyard may have on the sustainability of our land, water resources and the wider environment.

Thompson Estate's environmental management system applies to all its operations and services. Staff representing us in other offices in Australia and overseas are expected to comply with the spirit of this policy in the context of the organisation in which they work.

Thompson Estate aims at achieving continual environmental improvement through implementing a management system with objectives and targets to minimise our environmental footprint by working with staff and other stakeholders through pollution prevention practices in compliance with legal and other requirements & be a role model for others to follow.

With the help of the Freshcare Environmental Codes of Practice we will strive and commit to managing our environmental effects and wastes in compliance with our legal obligations. Specifically, we will strive to continually improve our operations and commit to:

- Training all staff members and contractor in the responsibilities of pollution prevention, waste minimisation and all policies in the Code of practice.
- Improve efficiency of operations to minimise water consumption, energy consumption, as well as waste and pollution generation.
- Conduct regular internal audit of the environmental effects of our production to identify possible areas of improvement, and follow through with actions to achieve results.
